GHGA | DATA PORTAL

The national infrastructure for secure and FAIR sharing of human omics data.

https://data.ghga.de

Archive Phase

The current status enables users to browse, search, and – upon approval – access omics datasets available in the GHGA Data Portal.
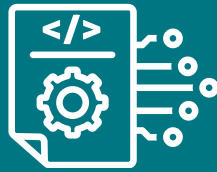

FAIR Metadata

All datasets are annotated using the GHGA Meta-data Model, which is compatible with EGA standards and supports FAIR data principles.

Data Access

Users can request access from data controllers via the GHGA Data Portal. A Data Access Committee appointed by the data controller reviews the request to ensure compliance.

Data Submission

External data uploads are not yet available. A submission portal for users to upload their data will be launched in a future release.

Visit the GHGA Data Portal to browse and discover data of interest.
